IPC USING SHARED MEMORY

Aim:

To write a C program to do Inter Process Communication (IPC) using shared memory between sender process and receiver process.

Algorithm:

sender

1. Set the size of the shared memory segment
2. Allocate the shared memory segment using shmget
3. Attach the shared memory segment using shmat
4. Write a string to the shared memory segment using sprintf
5. Set delay using sleep
6. Detach shared memory segment using shmdt

receiver

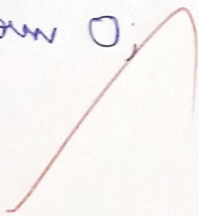
1. Set the size of the shared memory segment
2. Allocate the shared memory segment using shmget
3. Attach the shared memory segment using shmat
4. Print the shared memory contents sent by the sender process.
5. Detach shared memory segment using shmdt

Program Code:

sender.c

```
#include<stdio.h>
#include<sys/ipc.h>
#include<sys/shm.h>
#include<unistd.h>
int main()
{
    int size=1024
    key_t key=ftok("shmfile",65);
    int shmid=shmget(key,size,0666|IPC_
                                CREAT);
```

```
char *shared_memory = (char *) shmat(shmid, NULL, 0);
sprintf(shared_memory, "Hello from the writer process!");
printf("writer: Message written to shared memory: %s\n", shared_memory);
sleep(5);
shmdt(shared_memory);
return 0;
}
```



receiver.c

```
#include <stdio.h>
#include <sys/ipc.h>
#include <sys/shm.h>
int main() {
    int w = 1024;
    key_t key = ftok("shmfile", 65);
    int shmid = shmget(key, size, 0666|
                       IPC_create);
    char *shared_memory = (char*) shmat
                          (shmid, NULL, 0)
    printf("Receiver: Message read from
            shared memory: %s\n", shared_
            memory)
    shmdt(shared_memory);
    shmctl(shmid, IPL_RMID, NULL)
    return 0;
}
```

Sample Output

Terminal 1

```
[root@localhost student]# gcc sender.c -o sender
[root@localhost student]# ./sender
```

Terminal 2

```
[root@localhost student]# gcc receiver.c -o receiver
[root@localhost student]# ./receiver
Message Received: Welcome to Shared Memory
[root@localhost student]#
```

Output :-

Sender: Message written to shared memory: Hello from the sender process?

Receiver: Message read from shared memory. Hello from the sender process?

Result:

Hence the code for IPL using shared memory has been executed successfully
